## Please Note:

Apply the swab to the surface under investigation; rotating gently to ensure the entire surface of the swab comes into contact with approximately 10cm<sup>2</sup> of the area being tested. Enter the details of the area sampled on the above table, and then clearly label the swab with the corresponding number. This procedure should be followed for each swab to ensure that results are consistent.

Post on the day of sampling to the York Laboratory at the address below, should this not be possible, store samples in the fridge at 2-8°C until you are able to do so.
